

# Sun Color Matching Guide

This chart provides color formulations to match Sun's main colors. Due to variances in pigments and color batches, as well as other factors, all color swatches and their corresponding formulations should be considered close matches to the final product, not necessarily an exact match. Due to the limitations in the standards, RAL numbers are provided as closest match to the finish color, not necessarily an exact match. Due to the variations in color representation on computer monitors, CYMK, HEX, and RGB codes are for general reference only and may not appear the same as a physical color swatch or sample.
