

Finishing Tape Removal Instructions

This unit has finishing tape applied around the perimeter of the glass. It is there to protect the back side of the wood glass stops from stain or paint seepage during the finishing process. After the wood interior has been painted or stained, the exposed tape can be removed by the method indicated below.

1. Using a razor knife or similar tool, cut through the tape along the edge of the glass stop.
2. Peel away the tape.
3. Clean the glass with glass cleaner.
